```
* SUPPOSE THAT THREE SEED GROWTH PROMOTING METHODS (METHOD) ARE
  APPLIED TO SEED FROM EACH OF FIVE VARIETIES (VARIETY) OF TURF
  GRASS. SIX POTS ARE PLANTED WITH SEED FROM (METHOD)X(VARIETY)
  COMBINATION. THE RESULTING 90 POTS ARE RANDOMLY PLACED IN A
  UNIFORM GROWTH CHAMBER AND THE DRY MATTER YIELDS (YIELD) ARE
  MEASURED AFTER CLIPPING AT THE END OF FOUR WEEKS. VARIEY AND
  METHOD ARE REGARDED AS FIXED EFFECTS. THE EXPERIMENT IS A 3 BY
  5 FACTORIAL COMPLETELY RANDOMIZED DESIGN
