

1. In this course we will study statistical methods and data analysis for design of experiments, using SAS software.
2. The mathematics prerequisite for this course is high school algebra.
3. It is expected that the students will spend about 10 hours per week, every week for 14 weeks, in this course.
4. Homework is mandatory and is due by 1 pm on Fridays, a week after it is assigned. It has to be uploaded to Husky CT cite for this course by 1 pm on Friday. Late submissions of homework assignments, without a prior permission for an extension, are not going to be accepted.
Starting with the Homework Assignment no 3, a SAS file and an edited SAS output, that is readable for grading, has to be submitted. Without the SAS files a grade of 0 points will be assigned.
5. The three in class exams are going to be open book and open notes exams, as scheduled in the Syllabus. A scientific calculator will be needed. There is no final exam in this course.
Exam 3 will be scheduled during the last class of the Fall semester.
6. The grade for this course will be based on:

Exam 1	25%
Exam 2	25%
Exam 3	25%
Homework	25% (based on the highest grades of 10 homework assignments)

100%
